Other: Microsoft Azure, Google Cloud Platform(GCP), Troubleshooting, Problem Solving, Leadership, Teamwork, Adaptability, Written Communication, Critical Thinking

Diligent and insightful Information Technology student with proficiency in Python and SQL. Skilled in managing datasets, working with databases, and utilizing pivot-tables. Adaptable to fast-paced environments and adept at meeting tight deadlines. Seeking a Data driven role to leverage and expand technical expertise while making a meaningful impact on data-driven projects.

Work Experience

Data Engineer Intern

Activision Blizzard | Irvine CA

May 2023 – Aug 2023

- Developed data pipelines using Apache Airflow, ensuring efficient and reliable data movement and processing.
- Migrated data from Oracle to Google Big Query, optimizing data storage and retrieval for improved performance.
- Utilized Python to develop software solutions for the business, automating data-related tasks and improving data accessibility.
- Participated in code reviews and contributed to the improvement of data engineering best practices.

IT Support Intern

Florida Department of Transportation | Pompano Fl

Oct 2022 – Dec 2022

- Provided comprehensive hardware and software support, efficiently resolving technical issues for end-users.
- Diagnosed and repaired hardware faults, ensuring minimal downtime and smooth operations.
- Installed and configured hardware and software, contributing to system efficiency and productivity.
- Communicated with customers, actively listening to understand their problems, and delivering effective solutions promptly.

Projects

Development of Forex Trading Algorithm | OANDA REST API

- Designed and implemented a Python-based trading algorithm using various Python libraries.
- Gathered and processed historical prices and real-time tick data from OANDA's REST API.
- Conducted data cleaning and organization to ensure data quality for analysis.
- Executed trades based on well-defined assumptions.
